

VitaFit Momentum

Product Requirements Document

Description

VitaFitMomentum introduces two engagement features to improve repeat usage and retention.

Adaptive Coaching Journey transforms traditional gamification into a personalized coaching experience using tailored workout plans, contextual reminders, weekly milestones and recovery guidance.

Fitness Circles introduces small instructor-led communities (maximum 10 users) with shared weekly challenges and accountability.

Problem

Users join with high motivation but gradually disengage. Generic reminders, repetitive workout discovery, lack of accountability, and minimal emotional connection with instructors reduce engagement and long-term retention.

Why

Research from user reviews, Reddit discussions and fitness-app studies revealed common patterns:

- (1) motivation naturally declines after the first few weeks
- (2) tracking alone does not encourage repeat usage
- (3) generic reminders are ignored
- (4) users are more consistent when guided by a coach and supported by a small community
- (5) accountability drives habit formation.

Success

North Star Metric: Day-30 Retention Rate

Supporting KPIs: +20% Day-30 retention, +25% average weekly workouts/user, +30% weekly plan completion, 40% Fitness Circle adoption, improved CSAT and reduced missed-workout rate.

Audience

Primary: Working professionals (22–40), beginner/intermediate home-workout users.

Secondary: Women requiring adaptive pregnancy or menstrual workout plans.

What

Feature 1 – Adaptive Coaching Journey

- Personalized onboarding (goal, age, height, weight, schedule).
- AI-generated 7-day workout plan with one daily target.
- After completing the daily goal, users are guided to recovery content (stretching, breathing, mobility) instead of excessive workouts.
- Coach-style messages celebrate consistency and gently re-engage inactive users.
- Weekly feedback refines the following week's plan.

Feature 2 – Fitness Circles

- Unlocked after two weeks of consistent usage.
- Groups of up to 10 members matched by goal, fitness level and workout schedule.
- Weekly instructor-led consistency challenges, shared milestones and lightweight reactions.
- Women's adaptive circles automatically switch to recovery-focused challenges during menstruation.

How

MVP: Personalized onboarding, weekly plans, coach reminders and Fitness Circles.
Experiment: A/B test against the existing experience. Measure retention, weekly sessions, challenge participation and notification engagement. Week 1–2: Research & Wireframes
Week 3–6: MVP Development
Week7: QA
Week8: Beta
Week 10: Launch

Feature Justification

User Insight	Product Decision
Users lose motivation after initial excitement	Adaptive Coaching Journey with personalized weekly plans
Generic reminders are ignored	Coach-style contextual reminders
Users feel isolated	Fitness Circles (max 10 members)
Need accountability	Shared weekly goals and instructor check-ins
Women need flexible workouts	Adaptive menstrual/pregnancy plans
